

Formulation Sample

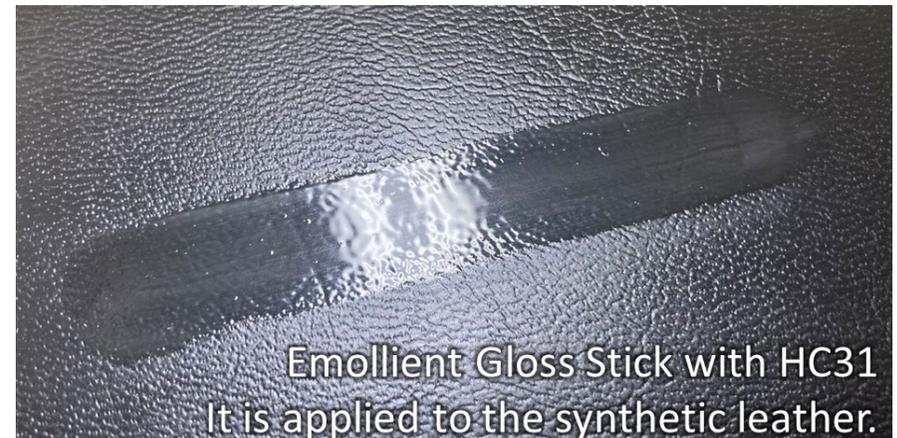

Emollient Gloss Stick / Gel with **CANDELILLA WAX HYDROCARBONS HC31**

Formulation No.: LGS-002NP / LGT-003NP

This gloss contains **CANDELILLA WAX HYDROCARBONS HC31** for filling in wrinkles. **HC31** is primarily composed of a hydrocarbon with 31 carbons, which is relatively short compared to typical synthetic hydrocarbons. This allows it to form minute crystals that fill in wrinkles. In the gel type, **CANDELILLA RESIN LLC** is added for improving glossiness and film thickness.

Product Name	INCI Name	wt%	
		Stick	Gel
A Pelemol TISC	Triisostearyl Citrate	89.4	87.6
